DIRECTIONS

1. Look at the screen below and turn the circular tree of life. The screen magnifies the small names on the outside of the tree.
2. Choose an organism, one of the magnified names.

3. Next to the name is a black line. Trace the black line until it meets the red line. This is where the organism with which humans you choose shares a common ancestor with humans. The nearer two lines join, the more closely the two organisms are related.
4. Try another organism. The sooner two lines join, the more closely the two organisms are related. Are humans more closely related to the first or second organism you chose?
